Good morning,

I'm Salesforce Developer and I'm part of the Aquiva Labs team (official Salesforce PDO partner).

**Context**
We developed a native Salesforce application that helps users analyze documents using AI. In our solution, we are using **Convert API** in order to fetch text from PDF files so we can further process it.

Currently, we are preparing for the Salesforce Security Review process - the process is required in order to make our application listed in Salesforce AppExchange listing. Generally, during this process, Salesforce checks whether our application is safe and free from security vulnerabilities (more details on the process here).

Before we submit our application for Security Review process, we need to scan any external endpoints our app is using, and provide generated report (details here). For this purpose, we are going to use OWASP Zap open source tool.

**Question**
I would like to ask you for your permission to run this tool only for Security Review process purposes. I would be grateful for a quick response.

If you have any further questions on this topic, I'll be happy to answer them.

Regards

Hello,

Yes, you can proceed with the scan.
